AI implementation consultant and business analyst with **11+ years of client-side enterprise IT experience** in the energy sector. I work between business and technology: analysing processes, identifying where AI and automation pay off, translating that into specifications, and overseeing vendor delivery and acceptance.

Background: SAP R/3 IS-U, SCADA, OMS/DMS, AMR/AMI and Smart Grid across 22 regional locations, with SAP SE, Schneider Electric / Telvent and Monitor Electric as counterparties. Since 2023, I have applied the same requirements and delivery discipline to AI systems and automation.

CORE COMPETENCIES

- AI and automation opportunity assessment: where it produces measurable effect, and where it does not
- Business process analysis and modelling (BPMN, UML)
- Requirements discovery with business stakeholders
- Solution specification developers can build from
- Vendor and implementation oversight: technical requirements, acceptance criteria, contractual claims
- UAT, commissioning and industrial acceptance
- Enterprise integration: SAP, CRM, ERP, REST API
- Contract and tender work: preparation, negotiation, execution control

TECHNOLOGIES

AI and automation — Anthropic Claude · OpenAI · Google Gemini · LLM APIs · AI agents · MCP · workflow automation

Enterprise and integration — SAP R/3 IS-U · SCADA · OMS/DMS · AMR/AMI · REST API · CRM / ERP · Microsoft 365 / SharePoint

Technical — Python · FastAPI · PostgreSQL · Firebird · Git · Docker

Languages — Polish C1 · English B1 · Ukrainian and Russian native

EXPERIENCE

EVAI Consulting (sole proprietorship), Elbląg — Founder, AI Implementation Consultant

09.2025 – present

Consulting on AI adoption and process automation: process assessment, use-case evaluation, solution specification and implementation oversight. Development delivered through external contractors where required; technical specification and acceptance stay with me.

- Author of **ANSS** — an open specification standard for AI-native systems
- Author of **AI Automation Decision System**
- Training non-technical users to work with AI on live projects

Independent AI and automation projects — Elbląg

2023 – 2025

Projects delivered independently before formalising the practice as EVAI Consulting.

- Built and deployed **eSowa KPI Bot** for a vehicle service workshop: a Telegram bot pulling technician output from the shop's Firebird database and sending each mechanic their daily and monthly figures, with a motivation feedback loop and an admin panel. Deployed on the client's own machine with offline installation and autostart (Python, Firebird, Telegram Bot API)
- Designed and delivered an AI system automating e-commerce catalogue preparation: supplier price-list processing, LLM-generated product descriptions, multi-level quality validation. Replaced a manual multi-hour process (Python, Claude API, Gemini API)
- Ran a full design cycle for an ERP system for a pawnshop chain: requirements analysis, process audit, 6000+ line technical specification, architecture, rollout plan with acceptance criteria (FastAPI, PostgreSQL, React)

Web projects — independent

2020 – 2023 | remote (USA, Poland)

- Led the build of a product-catalogue website for a glass and aluminium company in New York (glassaround.com): site structure, requirements, coordination of freelance developers, designers and SEO specialists
- Delivered a website for a renewable-energy company in Poland (tmaproject.pl): adaptation, localisation, Polish version

Project Manager / Business Analyst — energy sector

2009 – 2020 | regional electricity distribution operator (DSO), 22 locations

Enterprise programmes in a distributed environment: working groups of 5–9 managers and 8–20 specialists, 88 stakeholders across operating units, 22 regional locations, programmes with budgets of several million EUR.

- **Unified Grid Control Centre** (2019 – 2020) — project manager. Built regional control centres on the SK-11 platform (Monitor Electric): system integration, construction, coordination of 15+ specialists
- **OMS/DMS distribution management** (commissioned 2014) — project manager. Rolled out Schneider Electric / Telvent systems across regional control centres: integrations, real-time monitoring
- **SciMeter — SAP R/3 IS-U integration module** (commissioned 2010) — co-developed with SAP SE a module integrating SAP R/3 with wholesale and retail metering systems, including Smart Grid MDUS algorithms and API specifications
- **Neuron AMR/AMI under the Smart City programme** (commissioned 2009) — integrated billing with automated energy metering for residential and small-commercial customers: requirements analysis, documentation, UAT

Also: drafting and approval of technical requirements for vendor modifications, administration of deployed systems, commissioning and industrial-acceptance documentation, tender documentation, contractual claims.

SELECTED AI WORK AND PUBLICATIONS

ANSS — open specification standard for AI-native systems. Engineering discipline in one document, for teams and clients without an engineering department. CC BY 4.0, github.com/Kholomyanskiy/anss-standard

AI Automation Decision System — framework for deciding whether an automation or AI initiative is worth building: feasibility, effect, risk, implementation path.

Solo Founder OS — experimental AI agent system: a Node.js web interface over Claude Code running a virtual team of 11 role-based agents (backend, frontend, DevOps, QA, business analysis, sales, legal), so one founder can delegate across roles instead of switching between them. MVP built; in rework.
